

The idea of i want to create a platform for pet industry, proposal by Nextify

Problem Snapshot

Idea Problem Snapshot

Pet owners, service providers, and businesses lack a centralized platform to efficiently connect and manage pet-related services. This fragmentation leads to inconvenience, missed opportunities, and inefficiencies. Addressing this need now can create a thriving ecosystem.

JTBD by User Role

User Role	Jobs to be Done (JTBD)	Pain
Pet Owners	Find reliable pet sitters quickly.	Difficulty finding trustworthy sitters.
Pet Owners	Easily access and manage pet health records.	Scattered health data across multiple vets.
Pet Owners	Discover local pet-friendly travel options.	Limited information on pet-friendly destinations.
Pet Sitters	Get matched with pet owners seeking care.	Inconsistent client acquisition.
Vets	Streamline communication with pet owners.	Time wasted on administrative tasks.
Groomers	Fill appointment slots consistently.	Uneven demand and scheduling challenges.

Brainstorm Uses

Idea Brainstorm Uses

Here are some potential use patterns and present-day workarounds related to a concentrated platform for the pet industry:

- * **Booking pet-friendly travel:** Users currently spend hours on disparate travel sites, filtering for pet-friendly options and verifying policies.
- * **Tracking pet health data:** Pet owners often rely on manual spreadsheets, scattered vet records, and inconsistent notes to monitor their pet's health.
- * **Finding trusted pet sitters:** The search for reliable pet sitters involves word-of-mouth referrals, local bulletin boards, and vetting individual profiles on general marketplace platforms.
- * **Scheduling grooming appointments:** Pet owners call individual groomers, facing scheduling conflicts and a lack of transparency in pricing and services.
- * **Ordering specialized pet food:** Customers browse multiple online stores or visit local pet shops to find specific dietary requirements, comparing prices and availability.
- * **Accessing veterinary telemedicine:** Pet owners use general telemedicine platforms or search for individual vet practices offering remote consultations, often with limited availability and integration of health records.
- * **Managing vaccination and medication schedules:** Pet owners use personal calendars and rely on vet reminders to keep track of vaccinations and medications.

Audience Early

Audience & Early Adopters

Pet owners and pet-related businesses are the primary audience. A platform concentrating services addresses fragmentation. Identifying early adopters is critical for initial traction.

Segment	Why They Care
Pet Owners	Centralized access to services, convenience, pet well-being.
Pet Sitters	Access to more clients, streamlined booking.
Vets	Enhanced communication with owners, potential for new patients.
Groomers	Increased visibility, easier appointment scheduling.

Early Adopters

Early adopters are crucial for initial feedback and platform refinement. Focus on those most likely to embrace a new solution. These could include:

- * Tech-savvy pet owners active on social media.
- * Pet sitters seeking to expand their clientele.
- * Veterinarians open to using technology for patient management.

Lightweight Market Research Notes

- * **Competitive Landscape:** Identify existing platforms and their strengths/weaknesses.
- * **Regulatory Environment:** Research local regulations related to pet services (e.g., vet licenses).
- * **Partnerships:** Explore potential collaborations with local pet stores or animal shelters.

Competitors Market

Competitors (Direct & Adjacent)

- * **Rover:** Online marketplace for pet sitting and dog walking services.
- * **Tailwise:** Pet health and wellness platform offering personalized pet care plans.
- * **Zooplus:** Leading online retailer of pet food and supplies in Europe.
- * **PetPlan:** Pet insurance provider offering coverage for veterinary expenses.
- * **Local Pet Stores (Berlin):** Physical stores offering food, supplies, and grooming.

Market Size (TAM / SAM / SOM)

Assumptions:

Metric	Assumption	Value
Global pet care market	Total global pet care market size	\$250000000000
Serviceable %	Percentage of global pet care market serviceable by the platform (Berlin focus, specific services)	0.001
Obtainable %	Percentage of SAM realistically obtainable within the first 3 years	0.05

Calculations (include \$):

* TAM = $\$250000000000 \times 1 = \250000000000

* SAM = $\$250000000000 \times 0.001 = \250000000

* SOM = $\$250000000 \times 0.05 = \12500000

Assumptions Tests

Assumptions & Risks

* **Assumption:** Pet owners are willing to use a single platform for all their pet-related needs.

* **Assumption:** Pet businesses are willing to pay for listing and services on a new platform.

* **Assumption:** The platform can attract a critical mass of both pet owners and businesses to create a valuable ecosystem.

* **Risk:** Existing platforms and marketplaces already dominate specific niches (e.g., pet sitting, vet services).

* **Risk:** Building trust and ensuring quality control for services (e.g., pet sitters, vets) is challenging.

* **Risk:** Difficulty acquiring initial users in Berlin due to competition and established alternatives.

How to Test (Lean)

Assumption	Test	Success Metric	Timebox (months)
Single platform usage	Landing page with service sign-ups	100 sign-ups in Berlin	1
Business willingness to pay	Interview 10 pet businesses	7/10 express interest in paid listing	2
Attract critical mass	Run targeted ads in Berlin	50 pet owners & 10 businesses register	3

Features Rice

Product Candidates

- **Concept A: Pet Services Aggregator.** A single platform connecting pet owners with various service providers like vets, groomers, sitters, and food suppliers in Berlin.
- **Concept B: Pet Health & Wellness Hub.** Focuses on health data tracking, vet appointments, and personalized wellness recommendations, integrated with wearable devices.
- **Concept C: Pet Travel Companion.** Simplifies pet travel planning with flight booking, pet-friendly accommodation listings, and necessary travel document management.

Feature Candidates & RICE

Feature	Reach	Impact	Confidence	Effort	RICE
Vet Appointment Booking	200	4	0.7	2	280
Local Pet Sitter Directory	300	3	0.8	3	240
Personalized Food Recommendations	150	5	0.6	2	225
Pet-Friendly Travel Planning	100	4	0.5	1	200
Health Data Tracking	120	3	0.7	1	252
Online Pet Supply Store	250	2	0.9	4	112.5

How RICE Was Computed

- Reach = people per week.
- Impact = 1–5 scale.
- Confidence = 0–1.
- Effort = person-weeks.
- RICE = (Reach × Impact × Confidence) ÷ Effort.

Okrs

Lean Objective & Key Results (Next Quarter)

Establish initial traction for the pet platform in the Berlin metropolitan area.

Key Result	Baseline	Target	Data Source
Registered pet owners	0	500	Platform database
Listed pet-related businesses	0	50	Platform database
Platform active users per week	0	250	Platform analytics

Storyboard

Customer Journey Storyboard (Quarter 1)

Discover

Element	Description
Trigger	Pet owner searches online for local pet sitters in Berlin.
User Action	Lands on the platform via a Google search and explores the pet sitter directory.
Success Metric	Number of unique visitors exploring the pet sitter directory.
Instrumentation	Google Analytics, platform event tracking (page views).

Activate

Element	Description
Trigger	User finds a pet sitter profile that looks promising.
User Action	Clicks on the profile and sends a direct message to the pet sitter through the platform.
Success Metric	Number of pet owners sending messages to pet sitters.
Instrumentation	Platform event tracking (message sent), message volume.

Outcome

Element	Description
Trigger	Pet sitter responds to the pet owner's message.
User Action	Pet owner books a pet sitting service through the platform.
Success Metric	Number of completed pet sitting bookings.
Instrumentation	Platform event tracking (booking confirmed), booking value.

Tools

Tools to Use

Tool	Why We Use It
Miro	Visual collaboration for brainstorming and user journey mapping.
Typeform	Create surveys to validate assumptions about user needs.
Google Analytics	Track website traffic and user behavior post-launch.
Firebase	Mobile app development platform with analytics and crash reporting.
Amplitude	Product analytics to understand user engagement and retention.
Trello	Project management for organizing tasks and workflows.

Synthesis

Synthesis Summary

- * The fragmented pet industry in Berlin lacks a centralized platform for pet owners and businesses. This leads to inefficiencies in accessing services and managing pet-related needs.
- * A platform aggregating services like travel, healthcare data, grooming, pet sitters, food, and veterinary care addresses this problem for pet owners, pet sitters, vets, and other pet businesses.
- * Differentiation can be achieved through a focus on data-driven insights for pet health management and personalized service recommendations.
- * The initial feature set should include pet profile management, appointment scheduling for grooming/vet services, and a marketplace for pet food/supplies.
- * A key risk is low adoption rate from both pet owners and businesses due to established habits and competition from existing specialized platforms.

* Next proof points: Conduct user interviews to validate platform interest and identify key pain points. Create a Customer Journey Storyboard (Quarter 1).

Three Month Plan

Next Three-Month Plan

Milestone	Owner	Metric	Duration (days)
Market Research & Validation	Solo Founder	Number of interviews	30
MVP Scope Definition	Solo Founder	Feature list finalized	15
Platform Design & Prototyping	Solo Founder	Prototype completion	30
Initial User Acquisition Strategy	Solo Founder	Channels Identified	15
Legal & Regulatory Compliance	Solo Founder	Checklist Completion	15
Seed Funding Preparation	Solo Founder	Pitch Deck Complete	30
