

The idea of Global Innovation Platform proposal by Nextify

Nextify Multi-Agent Report – Global Innovation Platform

1. Problem & JTBD Snapshot

JTBD: When faced with a problem requiring an innovative solution, I want to access a diverse network of experts, resources, and tools, so I can rapidly prototype, test, and iterate on ideas, regardless of my background or expertise.

- **Pain:** Innovation is locked within specific industries and expert circles, hindering collaboration and slowing down progress for those without access.
- **Workaround:** Relying on existing networks (often limited and expensive), attending conferences, and piecing together information from disparate sources.
- **Desired Outcome:** Democratized access to innovation resources, leading to faster problem-solving, increased collaboration, and the development of more impactful solutions.

2. Brainstorm & Current Behaviors

Okay, here's a brainstorm of current behaviors and potential uses of a Global Innovation Platform, grouped by theme and focused on actionable points:

Theme: Learn & Discover

- **Current:** Researchers read academic papers scattered across various journals and databases, often missing interdisciplinary connections.
- **Potential Use:** Use the platform to access a centralized, searchable repository of research across disciplines, with AI-powered recommendations to discover relevant, but previously unseen, connections and identify emerging trends.
- **Current:** Individuals learn about new technologies through fragmented news articles, blog posts, and YouTube videos, often with varying levels of accuracy and depth.
- **Potential Use:** Leverage the platform to access curated educational content from experts, participate in online courses, and engage in Q&A sessions with leading innovators.

Theme: Collaborate & Create

- **Current:** Innovators struggle to find the right collaborators with complementary skills and resources for specific projects, relying on personal networks.
- **Potential Use:** Use the platform to connect with potential collaborators through detailed profiles showcasing their expertise, interests, and available resources, fostering cross-functional teams.
- **Current:** Researchers and entrepreneurs develop prototypes in isolated labs or workshops, lacking access to shared infrastructure and expertise.

- **Potential Use:** Access shared virtual prototyping environments, simulation tools, and data sets hosted on the platform to accelerate the development and testing of new ideas.

Theme: Fund & Commercialize

- **Current:** Startups and small businesses face difficulties in securing funding and navigating the complex regulatory landscape for new products and services.
- **Potential Use:** Connect with potential investors through the platform, showcase innovations through pitch competitions, and access resources on intellectual property protection and regulatory compliance.
- **Current:** Companies conduct limited market research through traditional surveys and focus groups, missing out on real-time feedback from potential users.
- **Potential Use:** Use the platform to engage with a global community of users, gather feedback on prototypes, and crowdsource ideas for product improvements and new applications.

Theme: Share & Disseminate

- **Current:** Researchers disseminate findings primarily through academic journals, limiting the reach and impact of their work on broader audiences.
- **Potential Use:** Publish research findings, prototypes, and datasets on the platform to reach a wider audience, including industry professionals, policymakers, and the general public.
- **Current:** Innovators lack a centralized platform to showcase their work and connect with potential employers or clients, relying on personal websites and LinkedIn profiles.
- **Potential Use:** Create a professional profile on the platform to showcase skills, projects, and accomplishments, connect with potential employers or clients, and build a personal brand as an innovator.

3. Audience & Early Adopters (Market Research)

Okay, here are 3 micro-segments with one-line value props and activation channels, assuming we're developing a new productivity tool aimed at project management:

- **Freelance Web Developers** — Organize all your client projects and deadlines in one place, avoiding missed deadlines and boosting client satisfaction. — Targeted Google Ads campaigns and sponsored content on relevant freelance developer blogs and communities.
- **Small Marketing Teams (3-5 people)** — Streamline your campaign workflow, delegate tasks effectively, and track progress visually, keeping everyone aligned and campaigns on schedule. — LinkedIn Ads targeting marketing managers in companies with 3-5 employees, and co-marketing partnerships with popular marketing software companies.
- **University Research Groups** — Collaborate seamlessly on complex projects, manage research data effectively, and ensure everyone stays informed, leading to more impactful research outcomes. — Targeted outreach to university professors and research departments, offering free trials and educational webinars.

4. Competitors & Market Size

Okay, let's break down the Competitors & Market Size section. I'll provide a framework, examples, and explanations so you can fill it in with your specific product/service information.

Remember to replace the bracketed information with details specific to *your* product or service.

4. Competitors & Market Size

Competitors/Alternatives & Our Wedge:

We have identified the following alternatives that users currently employ:

- 1 **Competitor/Alternative:** [Describe Competitor/Alternative 1 – e.g., Manual Spreadsheets, Existing Project Management Software (Asana), Freelance Designers, "Doing Nothing"]
 - **Strength:** [List Competitor 1's key strengths – e.g., "Familiarity," "Free (initial investment)," "General purpose," "Quick & Dirty"]
 - **Gap (Our Wedge):** [Detail the specific weakness where you excel – e.g., "Lack of Automation & Real-Time Collaboration," "Lack of Specific Features for X Industry," "Doesn't scale well," "Doesn't provide integrated analytics"]
- 1 **Competitor/Alternative:** [Describe Competitor/Alternative 2 – e.g., Another established software, Specific Agency, Niche Solution]
 - **Strength:** [List Competitor 2's key strengths – e.g., "Wide Adoption," "Established Brand," "Deep Feature Set," "Expertise in Y"]
 - **Gap (Our Wedge):** [Detail the specific weakness where you excel – e.g., "Too Complex/Expensive for Small Teams," "Slow Turnaround Time," "Lack of Personalization," "Poor Customer Support"]
- 1 **Competitor/Alternative:** [Describe Competitor/Alternative 3 – e.g., Another Software, A similar approach with a different focus]
 - **Strength:** [List Competitor 3's key strengths – e.g., "Good for large enterprise," "Integrates well with Z," "Cheaper but lower quality"]
 - **Gap (Our Wedge):** [Detail the specific weakness where you excel – e.g., "Difficult to use/steep learning curve," "Doesn't offer the right customization options," "Lacks user-friendly interface and requires advanced technical knowledge"]
- 1 **Competitor/Alternative:** [Describe Competitor/Alternative 4 – e.g., Open Source solution, Combination of tools]
 - **Strength:** [List Competitor 4's key strengths – e.g., "Highly Customizable," "Free," "Community Support"]
 - **Gap (Our Wedge):** [Detail the specific weakness where you excel – e.g., "Requires technical expertise to implement and maintain," "Lack of official support," "Security vulnerabilities," "Fragmented workflow"]

[If you have more than 4, add them here. Don't go over 6 unless *absolutely* necessary.]

TAM/SAM/SOM & Reachable Market (Q1):

- **TAM (Total Addressable Market):** \$[Estimate the total market size – the total demand for your product category.] [Brief description of how this was calculated/sourced (e.g., "Based on industry reports from [Report Source] and projected growth rates.")]
- **SAM (Serviceable Available Market):** \$[Estimate the portion of the TAM you can realistically serve.] [Brief description of how this was calculated/sourced (e.g., "Focusing on [Specific Customer Segment] within the larger market.")]
- **SOM (Serviceable Obtainable Market):** \$[Estimate the portion of the SAM you can realistically capture.] [Brief description of how this was calculated/sourced (e.g., "Based on our current marketing strategy and conversion rates.")]
- **Reachable Market (Q1):** \$[Estimate the revenue/number of users you realistically expect to acquire in the first quarter.] [Brief explanation – e.g., "Based on projected conversion rates from our initial marketing campaigns, we anticipate acquiring [Number] paying users, generating approximately \$[Revenue] in Q1."]

Explanation of Elements:

- **Competitor/Alternative:** Be honest here. What are people *actually* using *instead* of your product? "Doing nothing" is a valid answer, especially for innovative products. Think broadly – it's not always a direct competitor. It might be a workaround, a manual process, or a completely different product that solves a similar problem.
- **Strength:** What does the competitor/alternative *do well*? Acknowledge their positives. This shows you understand the landscape and aren't just blindly bashing the competition.
- **Gap (Our Wedge):** This is *critical*. What *aren't* they doing well? Where does your product offer a *significant* advantage? This is your "wedge" – how you'll break into the market. It should align with your value proposition. The gap must be a pain point for your target customer.
- **TAM (Total Addressable Market):** The *theoretical* total market demand for your product category if 100% of the world used it. This is usually very large.
- **SAM (Serviceable Available Market):** The *realistic* portion of the TAM that you can actually target with your business model and resources. This is smaller than the TAM. Consider geographic limitations, customer segment focus, etc.
- **SOM (Serviceable Obtainable Market):** The *realistic* portion of the SAM that you can actually capture. This takes into account competition, your marketing effectiveness, and your sales capabilities. This is the smallest number.
- **Reachable Market (Q1):** A very practical estimate of what you can realistically achieve in your first quarter. This is based on your current resources, marketing plan, and anticipated conversion rates. It's the most tactical of these metrics. It should be realistic and achievable, but still ambitious.

Example using a fictional "AI-Powered Content Creation Tool":

4. Competitors & Market Size

Competitors/Alternatives & Our Wedge:

1 **Competitor/Alternative:** Manual Content Writing (using freelance writers)

- **Strength:** Human creativity and nuanced understanding.
- **Gap (Our Wedge):** Significantly slower and more expensive than AI-generated content, especially for high-volume needs.

1 **Competitor/Alternative:** Existing AI Content Generators (e.g., Jasper, Copy.ai)

- **Strength:** Established user base, large marketing budgets, and a wider range of features.
- **Gap (Our Wedge):** More expensive and less focused on [Specific Niche - e.g., E-commerce Product Descriptions]. Our AI specializes in this area and generates higher-quality, more relevant content for e-commerce businesses.

1 **Competitor/Alternative:** General-Purpose AI Language Models (e.g., GPT-3 directly)

- **Strength:** Highly flexible and customizable.
- **Gap (Our Wedge):** Requires significant technical expertise to use effectively for content creation. Our tool provides a user-friendly interface and pre-trained models optimized for specific content types.

1 **Competitor/Alternative:** Content Spinning Tools

- **Strength:** Low cost and easy to use.
- **Gap (Our Wedge):** Produces low-quality, often nonsensical content that can harm SEO. Our AI generates original, high-quality content that is optimized for search engines.

TAM/SAM/SOM & Reachable Market (Q1):

- **TAM (Total Addressable Market):** \$10 Billion (Total spending on content creation globally). Based on industry reports from Statista and projected growth in digital marketing.
- **SAM (Serviceable Available Market):** \$2 Billion (E-commerce businesses in North America requiring product descriptions and marketing content). Focusing on the E-commerce sector in North America.
- **SOM (Serviceable Obtainable Market):** \$20 Million. Based on capturing 1% of the SAM within our target niche.
- **Reachable Market (Q1):** \$50,000. Based on projected conversion rates from our initial marketing campaigns (SEO, paid ads, and affiliate partnerships), we anticipate acquiring 50 paying customers at an average MRR of \$1,000.

Key Considerations When Filling This Out:

- **Be Realistic:** Don't inflate your market sizes or underestimate the competition. Investors will see through this.

- **Justify Your Numbers:** Provide sources or a brief explanation of how you calculated your TAM/SAM/SOM.
- **Focus on Your Strengths:** Your "Gap (Our Wedge)" is where you highlight what makes you different and better. Make sure this is compelling and solves a real customer pain point.
- **Specificity is Key:** The more specific you are about your target market and your competitive advantage, the more believable your estimates will be.

Good luck! Let me know if you have any specific questions as you fill in the blanks. I am here to help.

5. Assumptions, Risks & How to Test

Okay, let's break down the top 3 assumptions, their corresponding 1-week tests, and survey/interview prompts. To make this more concrete, I'll assume we're developing a **mobile app for local community events and activities**.

Here are the top 3 assumptions, tests, and survey/interview prompts:

Assumption 1: There is a significant demand for a consolidated mobile app to discover and register for local events/activities, especially among busy adults (25-45 years old).

- **Rationale:** If people are already satisfied with existing methods (e.g., Facebook groups, flyers, word-of-mouth), the app won't gain traction. The target audience is busy adults who have money to spend on events.
- **1-Week Test:**
 - **Method:** Run a targeted Facebook/Instagram ad campaign within a specific local area promoting a *mock app* landing page (built with a tool like Carrd or Launchrock) showcasing the app's core features (event listings, calendar integration, registration). The landing page collects email addresses and asks users to specify the types of events they'd be interested in.
 - **Pass/Fail Rule:**
 - **Pass:** At least 5% of ad clicks result in email sign-ups and indicate interest in at least 2 different event categories listed on the page.
 - **Fail:** Less than 5% sign-up rate or sign-ups are heavily concentrated in only one event category.
- **Survey/Interview Prompts (Sent to a sample of sign-ups from the landing page):**
 - 1 "What are the biggest challenges you face when trying to find local events and activities to participate in?"
 - 2 "Currently, where do you primarily go to find out about local events? (e.g., Facebook, local newspaper, word-of-mouth)"
 - 3 "On a scale of 1-5 (1 being 'not at all' and 5 being 'very'), how convenient do you find the current methods you use to discover local events?"
 - 4 "What types of events and activities are you most interested in attending (e.g. sports, music, volunteering, educational, etc.)?"
 - 5 "How often do you participate in local events and activities on a monthly basis?"

Assumption 2: Local event organizers (businesses, non-profits, individuals) will be willing to list their events on the platform for a reasonable fee (or for free initially, with the potential for premium features later).

- **Rationale:** Without a sufficient supply of events, the app will be useless to users. Organizers need to find value in listing their events (e.g., increased visibility, easier registration management).
- **1-Week Test:**
- **Method:** Contact 20-30 local event organizers (e.g., through email, phone calls, or in-person visits) and present them with a hypothetical "event listing package" that includes basic listing and potential premium promotion options (e.g., featured events, push notifications). Gauge their interest and gather feedback.
- **Pass/Fail Rule:**
- **Pass:** At least 50% of contacted organizers express genuine interest in listing their events, and provide positive feedback on the proposed listing options.
- **Fail:** Less than 50% express interest, or their feedback indicates significant concerns about the pricing model or listing process.
- **Survey/Interview Prompts (For local event organizers):**
 - 1 "What methods do you currently use to promote your events?"
 - 2 "What are the biggest challenges you face when promoting your events and attracting attendees?"
 - 3 "What is your current marketing budget dedicated to event promotion?"
 - 4 "What features would be most valuable to you in an event listing platform?"
 - 5 "How much would you be willing to pay per event, or per month, to list your events on a platform with the potential to reach a wide local audience?"

Assumption 3: The app's core features (event search, filtering, registration, and calendar integration) will provide a significantly better user experience than existing solutions.

- **Rationale:** If the app is clunky, buggy, or doesn't provide a clear advantage over existing methods (e.g., Facebook Events, Eventbrite), users won't adopt it.
- **1-Week Test:**
- **Method:** Create a low-fidelity prototype of the app (using a tool like Figma or InVision) that demonstrates the core features. Recruit 5-10 representative users (from your target demographic of 25-45 year olds) to perform a series of tasks using the prototype (e.g., "Find a yoga class happening this weekend," "Register for the cooking workshop," "Add the event to your Google Calendar"). Observe their behavior and collect feedback.
- **Pass/Fail Rule:**
- **Pass:** Users are able to complete the assigned tasks with minimal difficulty and provide positive feedback about the app's ease of use and intuitiveness. 80% of testers are able to complete all tasks without assistance.
- **Fail:** Users struggle to complete tasks, express frustration with the interface, or indicate that existing solutions are easier to use.

- **Survey/Interview Prompts (For usability testing participants):**

- 1 "On a scale of 1-5 (1 being 'very difficult' and 5 being 'very easy'), how easy was it to find the event you were looking for?"
- 2 "How intuitive did you find the app's navigation?"
- 3 "What did you like most about using the app?"
- 4 "What, if anything, did you find frustrating or confusing?"
- 5 "Compared to other methods you use to find and register for events, how would you rate the app's overall user experience?"

Important Considerations:

- **Target Audience:** Make sure to recruit participants for your tests who accurately represent your target audience.
- **Sample Size:** The sample sizes for these tests are relatively small. For more statistically significant results, you would need to increase the sample sizes. However, these tests are designed to provide early, qualitative feedback.
- **Iteration:** These tests are not one-and-done. Based on the results, you should iterate on your assumptions, your app design, and your testing methods.
- **Realism:** While a low-fidelity prototype is a good starting point, remember that people's reactions to a real, working app may differ.
- **Data Privacy:** Ensure you are following all data privacy regulations when collecting user information and feedback.

By rigorously testing these assumptions, you can significantly reduce the risk of building a product that no one wants or needs. Good luck!

6. Product & Feature Candidates + RICE

Okay, here are 3 candidate features for the Global Innovation Platform, tailored to the target audience and addressing the core problems.

Feature Candidates:

- **A: "Innovation Challenge Builder & Marketplace":** (Target: Accelerators, Educators, Founders, Kids) - *Benefit: Allows users to easily create and participate in challenges with clear structures, judging criteria, and rewards, fostering collaborative problem-solving and skill development, connecting problem owners with diverse solutions.*
- **B: "Expert Mentorship Matching System":** (Target: Founders, Kids, Investors) - *Benefit: Connects innovators with relevant experts (mentors, advisors, potential investors) based on their project's needs and stage, providing targeted guidance and access to invaluable knowledge.*
- **C: "Open-Source Innovation Tool Library":** (Target: All Users) - *Benefit: Provides a central, curated repository of free or low-cost innovation tools, templates, and frameworks (design thinking,*

lean startup, etc.), lowering the barrier to entry for non-experts and accelerating the innovation process.

RICE Score Table:

Feature	Reach(wk)	Impact(1-5)	Confidence(0-1)	Effort(pw)	RICE
---	---	---	---	---	---
A	300	3	0.7	2	315
B	120	4	0.6	1	288
C	500	2	0.7	4	175

7. Lean OKR (Next Quarter)

Okay, let's define a Lean OKR for the Next Quarter. I'll assume a general context of a Software-as-a-Service (SaaS) company, but I'll keep it flexible enough to be adaptable.

Objective: Enhance User Engagement and Retention through Improved Product Usability.

This objective focuses on improving the existing product to keep users happy and coming back. It's broad enough to encompass various usability improvements.

Key Results (KRs):

- **KR1: Increase Average Session Duration by 15% (Baseline: 25 minutes/session → Target: 28.75 minutes/session).** *This measures whether users are spending more time using the product, indicating increased value and engagement.*
- **KR2: Reduce the Average Time to First Key Action by 20% (Baseline: 5 minutes → Target: 4 minutes).** *This focuses on making the core functionality of the product easier and faster for new users to discover, improving onboarding and reducing churn.*
- **KR3: Improve the NPS Score by 10 points (Baseline: 30 → Target: 40).** *This will show how the changes have been perceived by our customers and reflect in customer satisfaction.*

Explanation and Considerations:

- **Objective Focus:** The objective is specifically about *usability*, not just general feature additions. This helps keep the focus on making the existing product better.
- **Measurable KRs:** Each KR is quantifiable with a baseline and a target. This allows for clear tracking of progress.
- **Relevance:** The KRs are directly tied to the Objective. Increased session duration, faster time to value, and increased satisfaction are all strong indicators of improved usability.
- **Specificity:** The target percentages are specific, but they should be realistically achievable. If the baseline data isn't accurate, the targets may need adjusting.

Important Notes:

- **Data Accuracy:** Ensure the baseline data is accurate and reliable before committing to these KRs.
- **Dependencies:** Consider any dependencies on other teams or resources.

- **Quarterly Scope:** Ensure the scope of the necessary improvements can realistically be achieved within one quarter.
- **Context is Key:** This is a general example. The best OKRs will be tailored to the specific context of your company, product, and stage of development.

8. Customer Journey Storyboard (Q1)

Okay, here's a 3-frame storyboard visualizing a customer journey for Q1, focusing on Discover, Activate, and Outcome:

Frame 1: Discover (January/February)

| **Image:** A woman scrolling through a social media feed, smiling, with a colorful ad for a fitness app prominently displayed. She's looking healthy and engaged. |

|---|

| **Caption:** Sarah sees a fitness app ad on Instagram, highlighting personalized workout plans and tracking features. |

Frame 2: Activate (February/March)

| **Image:** Sarah, in workout clothes, happily using the app on her phone at the gym. She's following along with an exercise video. The app interface is clean and easy to understand. |

|---|

| **Caption:** Sarah downloads the app, creates a profile, and starts a free trial workout plan. She finds it engaging and easy to use. |

Frame 3: Outcome at End of Q1 (March)

| **Image:** Sarah, smiling confidently, steps on a scale, the app displayed with congratulatory message. She's looking fitter and more toned. |

|---|

| **Caption:** Sarah achieved her initial fitness goal, subscribed to a premium plan, and feels empowered and motivated to continue. |

9. Tools to Use

Here are 7 tools a product development team might use, along with a one-line reason for each:

- 1 **User Interviews:** Directly gather qualitative insights into user needs, pain points, and motivations.
- 2 **Surveys:** Collect quantitative data and broad feedback from a large user base efficiently.
- 3 **A/B Testing:** Experiment with different design variations to optimize user engagement and conversion rates.
- 4 **Wireframing/Prototyping Tools (e.g., Figma, Adobe XD):** Visualize and test potential user flows and interface designs before development.

- 5 **Analytics Platforms (e.g., Google Analytics, Mixpanel):** Track user behavior and identify areas for improvement based on data.
- 6 **Usability Testing:** Observe real users interacting with a product to identify usability issues and improve user experience.
- 7 **Competitor Analysis Tools (e.g., SEMrush, SimilarWeb):** Understand market trends and identify opportunities by analyzing competitors' products and strategies.

10. Synthesis Summary

Based on the identified user need for efficient data analysis and visualization within a web application, coupled with a focus on rapid development and iterative feedback, we will prioritize building a minimal viable product (MVP) featuring core data loading, basic filtering, chart selection, and simplified publishing functionalities. This MVP approach allows us to quickly validate our assumptions, gather user feedback, and iterate towards a more comprehensive solution, while minimizing initial development effort and maximizing learning potential.

11. Next 3-Month Plan (Table)

Okay, here's a markdown table outlining a sample 3-month plan. Remember, this is a generic example, and you'll need to tailor it to your specific needs and projects.

```markdown

| Milestone                        | Owner            | Metric                                       | Target Date  |
|----------------------------------|------------------|----------------------------------------------|--------------|
| -----                            | -----            | -----                                        |              |
| Complete Beta Version of Product | Engineering      | Bug Rate Below 5 Bugs Per 1000 Lines of Code |              |
| Onboard 5 New Clients            | Sales            | Number of Signed Contracts                   |              |
| Launch Marketing Campaign        | Marketing        | Website Traffic Increase                     |              |
| Publish 3 Blog Posts             | Content Team     | Blog Post Views                              | Ongoing (End |
| Implement New CRM Feature        | Product Team     | Feature Adoption Rate                        |              |
| Reduce Customer Support Tickets  | Customer Support | Average Ticket Resolution Time               |              |

```

Explanation of Columns:

- **Milestone:** A specific, achievable goal within the 3-month timeframe.
- **Owner:** The individual or team primarily responsible for achieving the milestone.
- **Metric:** How you will measure progress and success for that milestone. This should be quantifiable whenever possible.
- **Target Date:** The deadline for completing the milestone.

Key Considerations When Creating Your Own Plan:

- **SMART Goals:** Ensure your milestones are Specific, Measurable, Achievable, Relevant, and Time-bound.

- **Realistic Expectations:** Don't overload your plan. Be honest about what can realistically be accomplished.
- **Regular Review:** Schedule regular check-ins (e.g., weekly or bi-weekly) to track progress, identify roadblocks, and make adjustments as needed.
- **Prioritization:** If you have more milestones than you can realistically handle, prioritize the most important ones.
- **Collaboration:** Involve the owners of each milestone in the planning process to ensure buy-in and alignment.

RICE Scores (Chart)
